

# BUZZ WORDS

Product News | System Developments | Awards | Installations

## Latest product

We are now quoting for batteries (5 to 90 kW) available for delivery. Please contact us for details.

## Tracker v Roof

This graphic demonstrates why tracking (blue line) gives you a serious output boost in comparison with a static roof system (red line). The yellow line shows the typical household usage when people go out to work etc.

## Radio Coverage

Our CEO, Melissa Briggs, took part in BBC Radio 4's "You and Yours" on Monday 24th talking to Winifred Robinson about EV's. Hopefully this will lead to another programme focusing on her contribution to raising awareness about climate issues and renewable energy.

## Welcome to Buzz Words 3

Bee Solar Tech is on tour from this week:  
First stop - Fully Charged Live, South

When: Friday, Saturday and Sunday, 28th to 30th April,

Where: Farnborough International Exhibition Centre.

We'll be exhibiting and speaking here for the first time as part of the expert Heat and Energy Advice Team. Fully Charged have led the way on EV educations and promotion, but have now widened their scope into renewable energy as they are closely linked. Superb list of speakers and panels to listen to, + viewing multiple new EV marques and sustainability stands. Tickets from: <https://fullychargedlive.seetickets.com/event/fully-charged-live-south/farnborough-international/2452500#op1>

Sol

### Powering the energy system of the future

Solar & Storage Live, held at Birmingham's NEC from 18-20 October 2022, is the UK's most forward-thinking, challenging and exciting renewable energy show. The event celebrates the technologies at the forefront of the transition to a greener, smarter, more decentralised energy system.

The exhibition is the UK's largest renewable energy marketplace, hosting over 150 exhibitors from across the globe, generating solutions to help power the energy transition. This is where key stakeholders within the energy value chain are brought together with the innovators and disruptors to showcase their technology and service solutions needed to enable change at this critical time.

Old supply and demand models of power have already undergone a fundamental change due to technological advancement. In 2018, solar contributed to 31% of global generated power & will only increase along with co-located technologies.

However, the electricity produced by renewables is not always completely dependable, especially solar

being largely dependent on the weather. This is where storage comes in – stabilising the fluctuations in supply and demand.

Solar & Storage Live returns to Birmingham's NEC from 17-19 October 2023. This is our pick of the best exhibitors from last year's event, listed here in alphabetical order: Bee Solar Technology, Green 2 Delivery, Power Capacitors, Solarport Systems, Solar Proofing Solutions, Spotless Water & UK Greentech. Further details can be found on this page & the next.

We are very happy to be featured in Sustainability News as one of the most exciting products exhibited at Solar & Storage Live 2022.

## Exhibitions

4 shows are now coming up in the next 3 months. Details included in this edition, and on our events page. Check out our social media feeds too. We are on Twitter, Instagram and Facebook. Please give us a follow: @beesolartech

## Sustainability

Apart from protection around some of our aluminium frames, we are plastic free. We ship UK systems wrapped in blankets that are removed by us/the carrier. For deliveries up to 100 miles from our HQ we deliver by electric car. We pack our components in recycled bags and cardboard boxes. Please reuse them if you can. Systems sent outside the UK are packed using reusable wooden crates.

Next up will be the Spring Show at the NSBRC, Swindon, 13th & 14th May. We are giving a talk about solar tracking on Saturday at 2 pm. Tickets from: <https://tickets.nsbrc.co.uk/Home/EventDiary?fromdate=12/05/2023&todate=14/05/2023>

Catch us next at the Smallholding and Country Show, featuring renewable energy, 20th & 21st May, Bulth Wells, LD2 3SY

If you cannot get to any of those, how about the HomeBuilding and Renovation Show, 1st and 2nd July at Sandown Park in Esher, Surrey.

We have introduced a new colour - anthracite grey, replacing silver. Look out for photos of the first AG system being installed in the next few weeks.

We are talking to more and more installers and will publish a list, which will gradually be added to, in the next few weeks, to help people who would rather delegate the entire project to a third party.

Alongside our Meyer Burger panels, we are now able to offer another type - the Eurener 400 watt, made in Spain.

We are now also able to quote for Puredrive batteries made down the road from us in Cheltenham.

We are hoping to add a new product to our portfolio later this year - a mini camping and leisure tracker for caravans, motor homes and canal boats. Email us for more information.
