## Latest product

We are now stocking Solar Immersion Diverters by Marlec, with their displays. Use them to heat your immersion tank from your excess solar power.

## Wind sensor

We are now well advanced with our wind sensor solution and will be releasing further details early in 2023. It is being prototyped and tested in the harsh conditions prevalent on the island of Åland where all Heliomotion systems have been developed.

## Award Winner 25/11

## Welcome to Buzz Words!

We have lots to tell you about...

In the last 3 months, there have been many Heliomotion systems manufactured in England and delivered to several counties including Cornwall, Norfolk, Gloucestershire, Monmouthshire, Shropshire, Suffolk, Essex and Lancashire. Keep an eye on our website to see photos of the new installations as they are switched on. These six systems are helping to power the WMA HQ in Kings Lynn - we think it's the first UK HQ to be totally off-grid.

## Press Articles

This month Melissa, our CEO, is featured in a double page spread in My Green Pod magazine. Heliomotion is also featured in the New Scientist. Recently we have appeared in the Times and the Guardian, as well as Build It magazine and 3 online portals.

## Exhibitions

Last week we exhibited at the Eastbourne Sustainable Business and Solar Summit. We will be present at the next NSBRC show in January. Details soon.

## Social Media

Check out our social media feeds too. We are on Twitter, Instagram and Facebook. Please give us a follow: @beesolartech

## Sustainability

We ship UK systems wrapped in blankets that are removed by the carrier. We pack our components in recycled bags and cardboard boxes. Please reuse them if you can.

In October we welcomed John McLellan onto our team and he is already very busy handling multiple enquiries and helping out with a myriad of other tasks.

Do you have an interesting story to tell us about your installation? Send us a few details and a picture - and we will feature it on our website and maybe in the our next newsletter.

Did you know that we have two colours available - silver and green? Silver is proving more popular with commercial customers, green with residential.

We have recently shipped two British made PV-6 trackers to Virginia in the USA. They will be installed in January. The US market is potentially huge for us. (See below.)
